a second optical system for irradiating a screen with the light emitted from the spatial modulation element,

wherein the laser light source further includes:

~~an optical~~ bulk type optical wavelength conversion element in which periodic domain inverted structures are formed, and

a single mode fiber for conveying laser light from the semiconductor laser to the optical wavelength conversion element,

wherein the single mode fiber is configured to prevent a variation in temperature of the optical wavelength conversion element caused by a heat generated from the semiconductor laser.

~~wherein the semiconductor laser is wavelength-locked.~~

82. (Withdrawn) A laser device according to claim 78, wherein the spatial modulation element is a liquid crystal cell.

83. (Withdrawn) A laser device according to claim 79, wherein the spatial modulation element is a liquid crystal cell.

84. (Withdrawn) A laser device according to claim 80, wherein the spatial modulation element is a liquid crystal cell.

85. (Previously Presented) A laser device according to claim 81, wherein the spatial modulation element is a liquid crystal cell.

86. (Previously Presented) A laser device according to claim 81, wherein the laser light source further includes an optical waveguide for guiding the laser light from the semiconductor laser.
